                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "Transcriptional regulation by iron of a Vibrio cholerae virulence gene and homology of the gene to the Escherichia coli fur system.";

J. Bacteriol. 172:6863-6870(1990).

-I- FUNCTION: INVOLVED IN THE INITIAL STEP OF IRON UPTAKE BY BINDING FERRIC VIBRIOBACTIN, AN IRON CHELATIN SIDEROPHORE THAT ALLOWS V. CHOLERAE TO EXTRACT IRON FROM THE ENVIRONMENT.

-I- SUBCELLULAR LOCATION: Outer membrane.

-I- MISCELLANEOUS: REGULATION OF THE IRGA EXPRESSION IS NEGATIVELY REGULATED AT THE TRANSCRIPTIONAL LEVEL BY IRON.

-I- SIMILARITY: LOCAL TO OTHER TONB-DEPENDENT RECEPTOR PROTEINS.

MACTIVARION OF EXPRESSION OF The Escherichia coli cir gene by an iron-independent regulatory mechanism involving cyclic AMP-cyclic AMP receptor protein complex.";
J. Bacteriol. 172:3529-3533 (1990).
-!- FUNCTION: NOT YET KNOWN. POSTULATED TO PARTICIPATE IN IRON TRANSPORT. OUTER MEMBRANE RECEPTOR FOR COLICINS IA AND IB.
-!- SUBCELLULAR LOCATION: Outer membrane.
-!- INDUCTION: BY IRON AND BY A CYCLIC AMP RECEPTOR PROTEIN COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -! SIMILARITY: LOCAL TO OTHER TONB-DEPENDENT RECEPTOR PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 1; Length 663;
